

Product Number: 36

Intumescent Block Grille

Description:

The block grille is a non-clogging block type intumescent grille giving 90% free ventilation area. These come in an extensive range of sizes and can be made specially to order.

The block grille would be used in the fire barrier walls, ceilings, floors, doors and duct openings where a fire seal is required whilst offering free air movement.

Can be made circular if requested (prices available via quotation).
All standard block grilles are 38mm thick but can be manufactured down to 25mm.

Application:

Order the block grille to suit the opening to be protected. The block grille simply pushes into place. Mastic or silicone sealant can be used around the edges if required. Grilles can be made with lugs to screw into place for ceiling applications if required. Any type of grille front can be used or Envirograf front plates can be supplied (available in standard sizes or can be made to suit).

New Block Grille – this is a complete unit with front plate attached. Block grille section pushes into the opening and the whole unit is secured in place with screws through the attached front plate.
