## Intumescent Coated Fireproof Sponge

### **Description:**

Fireproof sponge impregnated and coated with intumescent material. Very flexible, but stable in small or large apertures. Unaffected by water or chemicals.

### **Use:**

For small or large expansion/movement joints, under raised computer floors, between glass screen walls (rainscreens, with or without ventilation) and concrete floors, and between metal cladding and concrete. Between modular buildings on top of each other.

### **Application:**

Supplied in sheets or strips from 10mm to 100mm thick (see price list for full range). The sponge is easily cut to size and compressed to fit into small apertures. The sponge is simply pushed into place where required to protect gaps and openings. A non-fibrous sponge which will expand around cables and services in a fire giving a smoke/gas and fire seal.
